

## LBT Bike Boxes

### Triathlon Aero Easyfit (Black box)

Our newest bike box is the Triathlon Easyfit and it is designed so that generally all you need to do is remove the wheels and pedals. It's one of the bigger boxes available and it has extra space for a wetsuit and some additional kit. It's especially designed for TT bikes as well as regular road bikes, the larger ENDURO mountain bikes, gravel bikes, plus some types of Touring bikes. Note for mountain bikes you will have to remove the handlebars.

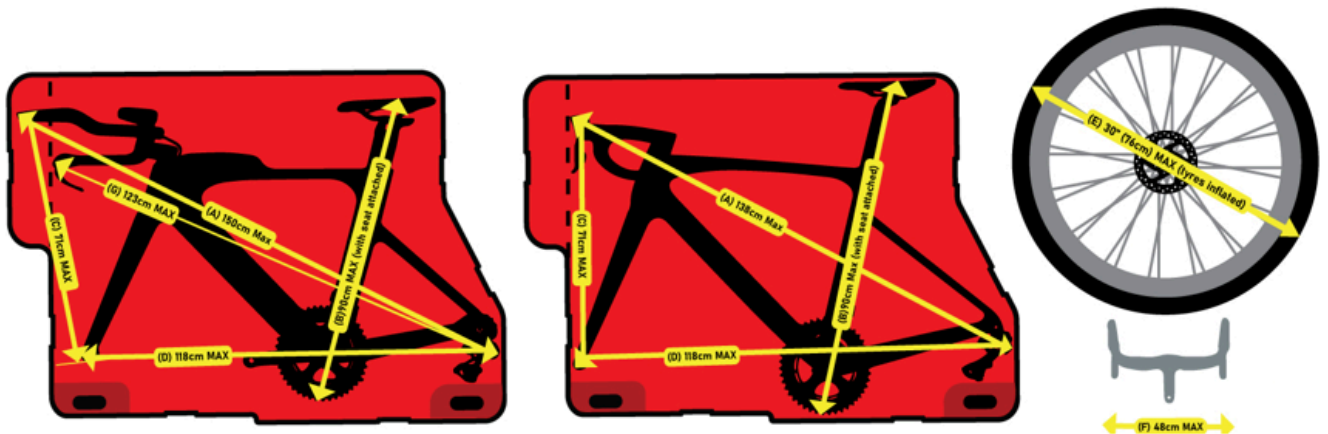

For road and triathlon bikes with riders up to 180cm in height, it's normal to just remove pedals and wheels. For larger riders and bikes you may have to lower the seat post and/or adjust the tri bar reach. The bike box can accommodate solid disc wheels – there is an adapter for this in the included box.

There is a YouTube video showing you how to pack the bike box which you can watch [here](#) and this bike box has a website that has full technical specifications [here](#).

Its external dimensions are 133 x 94 x 50 and its unpacked weight is 13.5kg

The Internal dimensions are as below.

### PBK Bike Bike (Red Box)

Our trusty PBK bike box has literally been around the world a few times and helped members race globally. If the (Black) Aero Box is booked or just that bit too big for you then our red box is still perfectly functional and will easily transport your bike safely, so it is still available for hire.

Please bear in mind however it is now showing its age and as with any bike box, it will need careful packing.

We have provided additional padding inside the box to assist with this, and the bike box has 4 locks on each of the clasps for additional security and peace of mind.

Its external dimensions are 124 x 94 x 34 and its unpacked weight is 12kg

The internal dimensions are as below.
